DETAILED ACTION

Response to Amendment

1. This action is responsive to an amendment filed 1/5/04. Claims 3-15, 19-22, 24, 27-28, 59-62, 65 and 67-72 are pending. Claims 1-2, 16-18, 23, 25-26, 29-58, 63-64 and 66 are cancelled.

Allowable Subject Matter

2. Claims 3-15, 19-22, 24, 27-28, 59-62, 65 and 67-72, renumbered 2-6, 1, 7-17, 19-20, 18, and 21-31 respectively are allowed.

Regarding Claim 1, the Examiner found no prior art, nor motivation to combine said prior art, that teaches a method of synchronizing time reference devices in the Head End of an access network with a plurality of distinct physical line cards and time reference devices, a synchronization signal to time-synchronize each device with each other, a first downstream channel transmitter and at least one first upstream receiver, and a second downstream channel transmitter and receiver, wherein a first time reference message is provided to a first node on the first downstream channel associated with the first time reference device and data is received from the first node at the head end via the second upstream channel including all subsequent limitations.

Regarding Claim 14, the Examiner found no prior art, nor motivation to combine said prior art, that teaches a method of configuring an access network comprising a Head End and a plurality of nodes, including an access control system having a plurality of

Art Unit: 2611

media access controllers with respective interfaces to the network, each including a distinct time reference device and a distinct plurality of ports for communicating with a plurality of nodes, comprising synchronizing the time reference devices in each of the controllers, assigning selected ports from the interfaces to particular domains where at least one port from a first interface is assigned to a first domain, and where at least one port from a second interface is assigned to the first domain in a cable modem network where the domains are DOCSIS domains.

Regarding Claim 18, the Examiner found no prior art, nor motivation to combine said prior art, that teaches a method of synchronizing nodes in an access network to a common time reference wherein a first node is provided with a first time reference message via a first downstream channel associated with a first media access controller, and a second node is provided with a second time reference message via a second downstream channel associated with a second media access controller, and wherein the nodes are synchronized together in a cable modem network across different physical line cards using the DOCSIS standard and wherein the first and second nodes are cable modems belonging to a first DOCSIS domain.

Regarding Claims 21, 24, 25 and 26-31, see Claims 1, 14 and 18 above.
